RAHUL LORE

SOFTWARE ARCHITECT

Available on Request · Cleveland, OH · (224) 360-9447 · rahullore@gmail.com · linkedin.com/in/rahullore

PROFILE

Senior Software Architect with 20+ years of experience designing scalable, distributed, and cloud-native enterprise platforms in healthcare and mission-critical environments.

Organizations usually bring me in when systems become difficult to scale, maintain, or modernize. I enjoy solving complex technical problems, especially in environments where reliability and stability truly matter.

Over the years, I have helped modernize legacy platforms, simplify complex architectures, and build scalable systems for real-time healthcare and telemetry workloads. I focus on practical solutions that reduce operational overhead, improve reliability, and help teams move forward without disrupting the business.

What sets me apart is the combination of architectural thinking and hands-on engineering experience: I stay close to real production challenges and design systems teams can successfully operate and evolve long term.

CORE EXPERTISE

Architecture	Distributed Systems · Event-Driven Architecture · Cloud-Native Systems · High Availability · Edge Computing · System Modernization
Backend	C# · .NET · ASP.NET Core · Kafka · SignalR · REST APIs · Background Services · Semantic Kernel · OpenAI Embeddings
Frontend	Nuxt · Vue.js · JavaScript
Cloud & DevOps	Azure · Docker · Kubernetes · GitHub Actions · CI/CD · Keepalived
Data	SQL Server · Entity Framework · NoSQL · Redis
Healthcare & AI	HL7 · Semantic Kernel · AI Integration · PowerShell

SELECTED PROJECT

Customer Orders — Applied AI & Full-Stack Architecture

Independent demonstration project exploring how AI capabilities fit into conventional software architecture using .NET, Nuxt, Semantic Kernel, embeddings, and business workflows. Explore the live application

PROFESSIONAL EXPERIENCE

Talis Clinical LLC — Software Architect · Streetsboro, OH

Aug 2016 – Present

- Architected real-time healthcare streaming platforms using Kafka and SignalR for scalable patient telemetry delivery across clinical systems.
- Led modernization of legacy healthcare applications into cloud-native and event-driven architectures using Docker and distributed backend services.
- Designed distributed systems for processing live patient vitals and waveform telemetry with low-latency delivery and resilient message routing.
- Architected and deployed a lightweight high-availability healthcare edge platform on Raspberry Pi using Docker, Nuxt, ASP.NET Core APIs, and background processing services to aggregate live vital feeds into HL7 integration streams.
- Designed automatic failover and high-availability mechanisms using Keepalived and Virtual IPs, enabling resilient edge-device operation with minimal infrastructure footprint.
- Built containerized CI/CD deployment pipelines using Azure Pipelines and Docker to support zero-touch deployments across healthcare and IoT environments.
- Implemented centralized observability using Seq and Serilog to improve production monitoring and troubleshooting efficiency.
- Led architecture initiatives around scalability, cloud cost optimization, resiliency engineering, and deployment automation.

CitiusTech Inc — Solution Architect · Princeton, NJ

Aug 2012 – Aug 2016

- Evaluated AI-driven automation opportunities and healthcare interoperability solutions for future platform innovation.

- Led the migration of an anesthesia platform from VB6 to .NET, focusing on maintaining architectural integrity and achieving minimal bug rates post-transition.
- Configured an Awesomium wrapper in .NET to facilitate integration of HTML5 UIs into existing VB6 applications, advancing system modernization.
- Orchestrated technical and architectural alignment across multiple Scrum teams, aligning development efforts with the overarching system architecture.

Selected client engagements

Home Care Home Base

- Maintained comprehensive architectural documentation, ensuring project deliverables adhered to rigorous Definition of Done criteria.
- Directed the design and deployment of a key WinForms-based module for a healthcare application, enhancing patient-data management efficiency.
- Used C# and the MVP pattern to improve framework maintainability and system sustainability.
- Established a multithreaded architecture using the C# Task Library to improve UI responsiveness.
- Mentored a team of 15 junior developers through targeted hands-on training.

Village Health (DaVita)

- Developed a .NET-based tool to simulate mobile clients, streamlining load and security testing for a mobile module.
- Led migration from Silverlight to AngularJS, improving UI interactivity with JavaScript techniques.
- Crafted RESTful services with ASP.NET Web API for secure client/server data exchange.
- Transferred MVVM patterns from Silverlight into JavaScript libraries for AngularJS applications.

PROFESSIONAL EXPERIENCE · CONTINUED

Capgemini — Senior Consultant · Mumbai, India

Aug 2010 – Aug 2012

- Developed a .NET job framework to streamline deployments and increase system availability for continuous operation in large-scale IT environments.
- Customized ASP.NET controls to meet business requirements and improve interface responsiveness.
- Addressed application performance issues with SQL query optimization and strategic database indexing.

Bank of America Merrill Lynch — Analyst · Mumbai, India

May 2007 – Jul 2010

- Authored a reusable .NET caching framework to improve object retrieval through efficient local caching.
- Implemented a .NET-based job framework to streamline deployment processes and improve operational efficiency.
- Used NUnit for test-driven development and integration integrity between new and existing modules.
- Designed pluggable components using generics and multithreading for efficient bulk updates and data processing.
- Constructed reusable .NET custom controls for accessing static employee and country data from the CARTS database.
- Designed a caching framework for the CARTS database to address performance bottlenecks and improve retrieval efficiency.
- Managed a diverse international user base by tailoring solutions to regional business-logic requirements.

EDUCATION

- Master of Computer Applications (MCA) — Mumbai University, India · 2005
- Bachelor of Computer Science — Mumbai University, India · 2002
